RE: North Princeton Water Main Improvement Project

Dear Resident:

The Village of Villa Park will be installing new water main on North Princeton Avenue over the next few weeks as a part of its **North Princeton Water Main Improvement Project**. This work will take place from Terrace Street to a location north of Plymouth Street. In addition to the new eight-inch (8") ductile iron water main which will be installed, the project will also include the installation of new water services and fire hydrants. The project is part of ongoing efforts to enhance and update Village infrastructure, and should help to improve water system pressure, reliability, and fire protection for residents. In addition to the pending water main improvements, street improvements on North Princeton Avenue from Terrace Street to Ridge Road are scheduled to follow next year.

Construction of the water main is tentatively scheduled to begin on Wednesday, October 28, 2015, weather permitting. Preliminary construction efforts, including the installation of traffic control, mobilization of materials and equipment, locating of underground utilities, and sawcutting of the pavement, will begin first. The new water main will generally be installed in the east curb line, with the exact location depending on the portion of the project area. There will be certain times throughout the project when water service may be interrupted in order to facilitate construction efforts. We plan to notify residents in advance of any scheduled water service interruptions so that they may plan accordingly.

Traffic on adjacent streets may also be affected by construction efforts. There may be a need for temporary road closures throughout the project as equipment or materials move in and out of the site. Access to properties' driveways may also be restricted for periods of time while work is taking place in front of those particular properties. Residents will have access to their driveways overnight throughout most of the project, with the exception that any necessary restoration of curb and gutter, driveway aprons, and sidewalk may result in loss of driveway access while those restoration efforts are taking place. Residents will be allowed to park overnight on the street, where permitted, during those times. We will work with residents to keep them informed of any planned work efforts which may cause additional inconvenience.

The general contractor for this project is Gerardi Sewer and Water Co. of Norridge, Illinois. All questions and comments regarding this project should be directed to the Village of Villa Park Engineering Division at (630) 834-8505. We will make every attempt to keep you informed of construction progress and activities, and thank you in advance for your patience throughout the course of this project. If you have any questions or would like additional information, please do not hesitate to contact us at the number listed.
