RE: Washington Street Green Infrastructure Improvements

Dear Resident:

Construction of the Village of Villa Park's **Washington Street Green Infrastructure Improvements** is expected to resume the week of April 2, 2018. A number of preliminary construction efforts, including construction layout, locating of underground utilities, installation of traffic control, and mobilization may begin sooner. These preliminary efforts should take a few days to complete, and full construction operations will follow.

The remaining project efforts consist of stormwater management facilities including storm sewers, bioretention areas, and filter strips. More specific information for this project can be found on the Village of Villa Park's "Washington Street Green Infrastructure Improvements" page located at <http://www.invillapark.com/690/Washington-Street-Green-Infrastructure-I>.

Traffic on streets within the project limits will be affected by construction efforts. Parking will not be permitted on streets in the project area. There may be a need for temporary road closures throughout the project as equipment or materials move in and out of the site. Access to properties' driveways may also be restricted for periods of time while work is taking place in front of those particular properties. Residents should have access to their driveways overnight during portions of the project; however, when concrete and roadway work is taking place in or adjacent to the driveway, access will be lost. If driveway access must be restricted, residents will be notified in advance, and if access is blocked overnight, residents will be allowed to park overnight on adjacent streets where permitted. We ask that motorists follow all posted signs.

The general contractor for this project is Chicagoland Paving Contractors, Inc., of Lake Zurich, Illinois. All questions and comments regarding this project should be directed to the Village of Villa Park Engineering Division at (630) 834-8505. We will make every attempt to keep you informed of construction progress and activities, and thank you in advance for your patience throughout the course of this project. If you have any questions or would like additional information, please do not hesitate to contact us.

The Village will have a consultant on site full-time through the project to help coordinate construction.
